

Document default: Montserrat via Font(resource)

Every weight declared in the FontFamily embeds from its own file.

Bold weight comes from Montserrat-Bold.ttf.

Large heading, still Montserrat

Per-text families

Bundled InterFontFamily — zero setup, works everywhere

Inter bold italic from the bundled static files

Generic families (resolved by the platform, then embedded)

FontFamily.SansSerif — the platform's sans

FontFamily.Serif — the platform's serif

FontFamily.Monospace — the platform's mono

Generic families depend on the host's installed fonts — bundle a Font(resource) family instead when output must be identical everywhere.

Spacing-sensitive sample

Late Fee - 2.5% (\$34.69) + \$5.00 fixed — glyph positions and widths come from the same font, so spacing is exact.
